

Attending Gateways 2026 would strengthen my work as a **2026 NSF NAIRR AI Education Fellow** and help me expand equitable access to AI and cyberinfrastructure at Clark Atlanta University. As a Full Professor and Special Assistant to the Provost for AI, Data, and Analytics, I am committed to integrating advanced computing resources into teaching, research, and workforce development. Through my **NAIRR Jetstream2 allocation** and the use of **CloudBank Hub** during the Atlanta University Center Data Science Initiative's pre-freshman program, I have demonstrated how science gateways can provide students with accessible, cloud-based learning environments for AI and data science. At the conference, I will present a poster on my graduate course, **Economics for Public Administrators**, highlighting how I am incorporating Jetstream2 and CloudBank Hub to support instruction in economics, data analytics, and AI-assisted policy analysis. I will also share lessons learned from integrating cloud computing and responsible AI into graduate and undergraduate curricula at an HBCU. I look forward to learning from the science gateways community while exchanging ideas on curriculum innovation, faculty development, and broadening participation in AI education. Ultimately, I hope to build collaborations that advance the use of science gateways to prepare a diverse next generation of AI researchers, educators, and public sector leaders.
