

Gateways Catalog Requirement

- Jetstream2: Students will use Jetstream2 to run R/RStudio for the syllabus's Module 3 data-science labs, economic-data analysis, and visualizations required in problem sets.
- CloudBank ACCESS: Students will use CloudBank ACCESS to support reproducible R projects, cloud-based analysis, and the final policy-data project described in the syllabus.
- R for Data Science: Students will use this text to build the R skills needed for data cleaning, visualization, and evidence-based policy storytelling in Modules 3 through 8.
- OpenAI: When authorized, students will use OpenAI as a learning assistant to explain economic concepts, refine R code, and check analytical approaches for problem sets and the final project.
- Anthropic Claude: Students will use Claude to support policy-option development, code troubleshooting, and clearer interpretations of market-failure analyses, while documenting and validating its assistance.
- Google Gemini / AI Studio: Students will use Gemini and AI Studio to compare AI-assisted approaches to economic-data analysis, visualization design, and responsible AI use addressed in Module 8.
- Microsoft Copilot: Students will use Copilot to assist with R code, project documentation, and reproducible workflow development for assignments submitted through Canvas.
